STD-VSL-0102 Pressure vessels (invented)

Revision 0 Engineering Standard (invented for testing)

1 Scope

This invented standard covers unfired pressure vessels.

4.1 Design pressure

The design pressure shall be at least 10 percent above the maximum operating pressure.

5.2 Corrosion allowance

The corrosion allowance shall be at least 3 mm.

5.4 Joint efficiency

The joint efficiency shall be at least 0.85.

6.1 Hydrostatic test

The hydrostatic test pressure shall be at least 1.3 times the design pressure.

8.2 Impact test

Impact test results shall be stated for shell material below minus 10 C design metal temperature.

9.1 Jacketed vessels

A jacketed vessel shall state the jacket design pressure.
